

Heat Pumps

14.0 to 20.0 SEER
8.2 to 10.0 HSPF
Single Stage, Two Stage
and Variable Capacity

A HOME ENVIRONMENT THAT'S EVERYTHING YOU WANT IT TO BE.

BUILT FOR LIFE. YOURS.

AIREASE

Built for life. Yours.

Delivering consistent comfort and peace of mind

Since 1928, we've been providing homeowners with reliable, well-built heating and cooling products that make life easier and more comfortable. Thoughtfully designed, our AirEase™ line of heat pumps offers an impressive array of technology that makes them extremely quiet, dependable and energy efficient. So you can enjoy peace, quiet and comfort every day of every year.

HVAC experts you can trust

Your comfort is our priority. Your AirEase Dealer will take the time to understand your comfort needs. They know you want the best performance, value and dependability from your heating and cooling system, and they have the products and expertise to help satisfy these demands. That means you can rely on your AirEase Dealer to help you to find the right comfort solution for your home and your lifestyle.

Helping to create the perfect environment.

Choosing the right heating and cooling system for your home environment is a big decision. Your AirEase Dealer can help you create the right system for your home comfort needs. To help you make the best and smartest system choice, here are a few things to consider:

EFFICIENCY

It's pretty simple. A high-efficiency system helps lower your monthly utility bills. Efficiency is measured in SEER (Season Energy Efficiency Ratio) during the summer and HSPF (Heating Seasonal Performance Factor) during the winter—the higher these numbers, the greater the efficiency. Replacing an older unit with a 14 SEER/8.2 HSPF or higher unit can increase performance and start saving you money immediately.

RELIABILITY

You can count on your AirEase unit. Technology developments such as MHT™ and Omniguard™, plus other advanced design features, work together to deliver premium performance and help extend the life of your heat pump.

AIR QUALITY

Where you live matters. Your family's sensitivity to a host of natural and man-made allergens means enhanced air quality is all the more critical in your home. And don't forget humidity levels when you're considering the ideal system for year-round comfort.

PEACE OF MIND

More control over your comfort—that's our commitment to you. You can see it in our craftsmanship and technology—like our proprietary Comfort Sync™ controls, which allow you to easily monitor your unit's performance and enjoy maximum comfort in your home.

NOISE REDUCTION

Comfort and performance also include quiet operation of your system. Enjoy reduced operating noise with select models featuring a high-quality sound blanket for noise reduction. Plus, Quiet Shift™ Technology reduces sound when transitioning to defrost mode.

Heat Pump System Basics

The most common type of system pairs an exterior heat pump with an interior air handler, in tandem to circulate air throughout your home. Heat pumps can also be paired with a furnace, which is then called a dual-fuel system. Matching your heat pump with a compatible AirEase air handler or furnace will help generate optimum efficiency and ideal system performance.

How compressor stages affect performance

Single stage means heating and cooling are either all the way on or all the way off, creating temperature swings.

Two stage runs at low or high operating speeds, depending on conditions, creating more even, consistent temperatures.

Variable capacity gradually ramps up and down to keep the temperature exactly where you want it, using even less power.

Corrosion Protection

Select AirEase Heat Pump units feature Omniguard™ Total Corrosion Protection Technology, offering improved corrosion protection compared to traditional coils and preserving the life of your system for years to come.

How It Works

*AirEase air handlers also work with air conditioners in straight cool configurations.

1. The heat pump on the outside of your home circulates refrigerant that absorbs and releases heat as it travels between the heat pump and the air handler inside.
2. When it's cold outside, a heat pump extracts outside heat and transfers it inside.
3. The refrigerant flows through the air handler's evaporative coil, which features Omniguard™ Total Corrosion Protection Technology that helps protect the coil from indoor corrosive elements such as aerosols, cleaners and other chemicals. The blower moves air across the coil surface to warm air that's sent through your home's ductwork.
4. The cold refrigerant is sent back to the heat pump outside so the process can repeat itself and continue to warm your home.
5. When it's warm outside, the heat pump reverses direction and acts like an air conditioner, removing heat from your home.

Technology designed with your comfort in mind.

Inside every AirEase heat pump, you'll find a high level of technology and craftsmanship, backed by a 10-Year Limited Warranty on the compressor* and a 10-Year Limited Warranty on parts.*

Model shown 4SHP20LX

MHT™ Technology

AirEase's proprietary heat transfer system uses a specially designed fan shroud, rifled tubing and lanced coil fins for maximum heat transfer and efficiency.

Noise Reduction

A swept-wing fan blade design reduces turbulence, while a heavy-duty compressor blanket helps to further reduce sound levels.

Quiet Shift™ Technology

Allows heat pumps to enter defrost mode without excessive noise. Since refrigerant pressure is allowed to equalize before the switch, the heat pump can quietly dissipate performance-robbing frost and ice.

Integrated Compressor Protection

High- and low-pressure switches protect the compressor, helping to ensure lasting performance.

Comfort Sync™ Control Panel

All Pro Series™ units continuously monitor internal components for optimum performance and fault prevention, and notify you and your dealer if repairs or maintenance are needed.

Inverter-Driven Scroll Compressor

Rather than running at one or even two speeds, the scroll compressor uses an inverter motor that can change its speed in small, precise increments, saving more energy while holding your temperature precisely where you set it.

Sealed Contactor with Lugs

Completely covers the contactor, protecting it from debris and insects.

Dual-Fuel

Pairing a gas furnace and an electric heat pump creates a dual-fuel system that can use two energy sources for the perfect balance of energy efficiency and comfort.

*Product registration required. Warranty applies to residential applications only. For terms, conditions and exclusions, see full warranty at airease.com.

Whether it's warm or cool, you'll be comfortable with these reliable single-stage heat pumps.

4SHP14LB

Proven technology & exceptional value

With SEER ratings beginning at 14, these heat pumps represent an effective heating and cooling solution at a great value. A cost-effective option ideal for regions with long summers, these units help keep you comfortable even in high temperatures.

Meets or exceeds 14 SEER / 8.2 HSPF

Quiet Shift™ Technology

Omniguard™ Total Corrosion Protection Technology

Integrated Compressor Protection

Single-Stage Scroll Compressor

Contactor with Lugs

Dual-Fuel Compatible

4SHP15LE

Committed to exceeding expectations

Delivering up to 15 SEER, the 4SHP15LE is the perfect blend of higher efficiency, quality and quieter operation. Thoughtfully designed to improve heat transfer and efficiency, these units may qualify for local utility rebates* and reduce monthly energy bills, while providing a comfortable home environment.

Up to 15 SEER / 8.5 HSPF

*Check with your local utilities to confirm eligibility. Rebates and incentives for efficiency vary by locality and utility. Allied does not make any representation, warranty, guarantee, or other assurance as to whether the each model qualifies or is eligible for rebates in your local area.

Pro Series™ heat pumps offer ultimate control with up to twice the energy savings of older units.

4SHP16LS

A powerful combination of performance & efficiency

Offering 16 SEER efficiency, the 4SHP16LS helps save you money every month, and may qualify for local utility rebates.* Because it operates at two different speeds, this heat pump provides enhanced performance with improved control over temperature and humidity throughout your home. Plus, the 4SHP16LS constantly monitors itself for optimum performance, giving you complete peace of mind.

Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet ENERGY STAR criteria. Ask your contractor for details or visit www.energystar.gov.
